Part II Reading and Understanding:

Please read the passages and answer the questions (5 pts.):

Six astronauts worked to fix a leak in the wall of the International Space Station. The problem was first detected by mission control Wednesday night as a reduction of pressure in the station, but it was small enough that the crews were allowed to sleep all night, NASA reported. The leak came from a two-millimeter hole in the orbital compartment of the Soyuz MS-09 spacecraft in the Russian segment. This section does not return to Earth. The hole was likely caused by a micrometeorite or orbital debris hitting the space station. As of Thursday afternoon, NASA reported that cabin pressure was holding steady. Flight controllers in Moscow worked with the crew to repair the hole with an epoxy gauze wipe. They also raised the cabin pressure in the station using the Progress 70 cargo ship's supply of oxygen. Meanwhile, flight controllers in Houston continue to monitor the situation. European Space Agency astronaut Alexander Gerst reportedly put his finger over the hole initially. "In effect, he literally touched space without a space suit," tweeted the YouTube channel Techniques Spatiale. The Russian space agency, Roscosmos, has created a commission that will investigate the cause of the leak. The European Space Agency reported crew members are in no danger, as there are weeks of air left in the ISS reserves.

31) Who did understand that there is something wrong in ISS?

- a) By astronauts.
- b) Flight controllers.
- c) Mission control.
- d) By ISS.

32) What does 'reduction' mean in the passage?

- a) Getting low.
- b) Not enough.
- c) Problem.
- d) Just enough.

33) What is the reason of the problem?

- a) Reduction of pressure.
- b) A Leak
- c) Crew members.
- d) A hole.

34) How did they raise the cabin pressure?

- a) Astronaut put his finger and blocked the hole.
- b) Flight controllers use computers to help the pressure.
- c) The pressure was stable already.
- d) They used Progress 70.

35) What do you understand from 'investigate' in the passage?

- a) To find the criminal.
- b) Try to find the material.
- c) Search for clues.
- d) Try to find the real reason.

A Japanese probe sent to examine an asteroid will now land several months later than planned, officials have confirmed. The Japan Aerospace Exploration Agency (JAXA) says the high-profile Hayabusa2 is expected to touch down on Ryugu at least three months behind schedule. Specifically, they cite 'late January' as the earliest possible opportunity, rather than the end of this month - which was the original time-frame. JAXA project manager Yuichi Tsuda said they needed more time to prepare the landing as data showed the asteroid surface was more rugged than expected. The mission is to land without hitting rocks,' Tsuda said, adding this was a 'most difficult' operation. 'We had expected the surface would be smooth... but it seems there's no flat area.' Scientists are already receiving data from other machines deployed on the surface of the asteroid. Last week, JAXA successfully landed a new 22lbs (10kg) observation robot known as MASCOT - 'Mobile Asteroid Surface Scout' - on the space rock. Loaded with sensors, the robot can take images at multiple wavelengths, investigate minerals with a microscope, gauge surface temperatures and measure magnetic fields. Ten days earlier, a pair of MINERVA-II micro-rovers were dropped onto the asteroid -- marking the first time that moving, robotic observation devices have been successfully deployed.

36) Which one of the answers explains the best for 'will now land several months later than planned' in the passage?

- a) It will land as soon as possible.
- c) Cannot land now.
- b) It landed few months ago.
- d) Can land few months later.

37) What can we understand from 'rugged' after we read the passage?

- a) Normal surface.
- c) Rocky surface.
- b) Surface.
- d) Smooth surface.

38) Which one of them is the best title for this article?

- a) Touchdown of a probe is delayed.
- c) What's wrong with the probe?
- b) No more touchdowns.
- d) Why we cannot?

39) Which one seems to be the problem for the probe?

- a) There are lot of gasses on the surface.
- b) The weather is not good for landing.
- c) The surface is not suitable for landing.
- d) Data information is not good enough.

40) What is the most dangerous thing for the probe?

- a) To hit a rock.
- c) System errors.
- b) To crush a rock.
- d) Bad surface.
